3D LEARNING ENVIRONMENT AS AN IMPORTANT INNOVATIVE

TECHNOLOGY FOR ENGLISH LANGUAGE CLASSROOMS

Khakimova Munira Khabibullayevna

Currently, the status of English is assessed as it has become the language of social context, business, education, industries, political, media, library, communication across borders and key subject in Curriculum and the language of imparting education. With the spread and development of English over the world, English has been learned and utilized by more and more people. Scientists define English as the language at the leading edge of scientific and technological development, new thinking in economies and management, new literatures and entertainment genre. Learning this language with new methods and up-to-date innovative technologies has a significant role.3D Learning is the innovative technology that can revolutionize the classrooms differently together with Wi-Fi equipped campuses. Here are some of them:

1. Widely used textbooks and handouts are claimed as costly and waste of paper. So, replaces
 on these sources use involving dated data are the easy way of utilizing 3D Learning
Environment   to update
information frequently without any headaches of recent textbooks purchasing and including
waste of time. Initially, although
3D Learning Environment
might seem as though they are precious, but taking into account the cost and time, one can
realize that how fast they pay back.

2. Students are to handle Audio and Video materials rather than educators. Since they
themselves will be in charge of playing the materials, they tend to decide how long to listen,
when to pause, when to reply and as well where to focus their listening while the material.

3. It is clear that public speaking is vitally important skill. Therefore, 3D Learning Environment
is the best way to make better tools for creating and delivering effective speeches in front of the
audience and there are many fascinating apps have been releasing for tablets that welcome to
utilize to integrate documents, Power point like slide shows, videos, pictures and as well as
customize apps onto presentations. Students have the scope to do live-time drawing, writing,
animating and showing interactive experiences. Since students circle, outline and note in
necessary points while their presentations, flexibility will be of some help for them.

4. 3D Learning Environment makes students or learners to amplify their imagination and
out-looking.   3D Learning Environment can easily print the data

out. We should teach one of the biggest mistakes that we make is having a replacement traditional educating with the innovative
3D Learning Environment
in the classrooms. What needs to be taken into account is the
3D Learning Environment
is a teaching tool; we are unable to execute the role of a physical supervisor. So, basically it is an appropriate use of item when we guide individuals towards their achievements of the eventual targets. If we tend to consume
3D Learning Environment
in our school, giving instructions for utilizing the equipment should not be missed. So, it is vitally essential to instruct them concerning utilization of the gadget amongst learners for their efficient purposes. In order for students to broaden their knowledge horizons they should not constantly share information with their peers at home, but extension by putting their stuff online publicly or for other classmates is considered as a better route.

5. With the help of Wi-Fi connections and web pages, students are highly likely being able to download, upload, share or collaborate.

6. An instant access to the web will be provided in order for doing some researches or access to the library of institutions' digital collections.

 7. The 3D Learning Environment is the mainly presentation gadgets and are connected to large displays and projection systems. Although computers are good equipment in terms of delivering the classroom lessons, yet it is believed that   3D Learning Environment is

outnumber many advantageous over PCs for utilizing them in education.

8. Since computer use plays an important role in our today's life with its increase in computer production and common everyday uses, students should have early preparations with the skills that will be of some aid for their benefit. Therefore, having 3D Learning Environment per individual ensures that they are to have crucial computer regarding skills needed for the future occupations.
It is believed that potential impacts of the 3D Learning Environment use being perceived in education nowadays, what might be achievements
in the following years, and especially, the effect on educators who teach languages and also institutions including different age groups.

In conclusion, 3D Learning Environment plays a great role to overcome classroom shortages and conundrums in which students might find hard to cope with and are the apt tech-devices to use them in the classrooms in order for learning to be enhanced.
